September 29, 2025

ABRA Space LTD.
71-75, Shelton Street, Covent Garden
London, United Kingdom, WC2H 9JQ

The SKYLAB 24 rocket engine was tested on 29 September 2025 by the ABRA Space team at our test stand. This test was carried out for the purpose of evaluating data on the performance of the engine, and no definitive determination was made as to its full compliance with the NFPA 1125 standard. However, according to the test results, the engine was judged to be suitable for model rocketry use and was approved by members of the ABRA Space Engine Testing Division.

Motor Details

Motor Manufacturer	ABRA Space LTD.
Manufacturer's Designation	ARMS – Amateur Rocket Motor System, single use
Propellant	C-Slot & Standart Burn
TMT Nomenclature	2515 / E

Physical Characteristics

Diameter	0.944’’	/ 24 mm
Overall Length (Forward Closure & Nozzle Included)	5.905”	/ 150 mm
Case Length	4.724’’	/ 120 mm
Inner Diameter	0.846’’	/ 21,5 mm
Wall Thickness	0.049’’	/ 1,25 mm

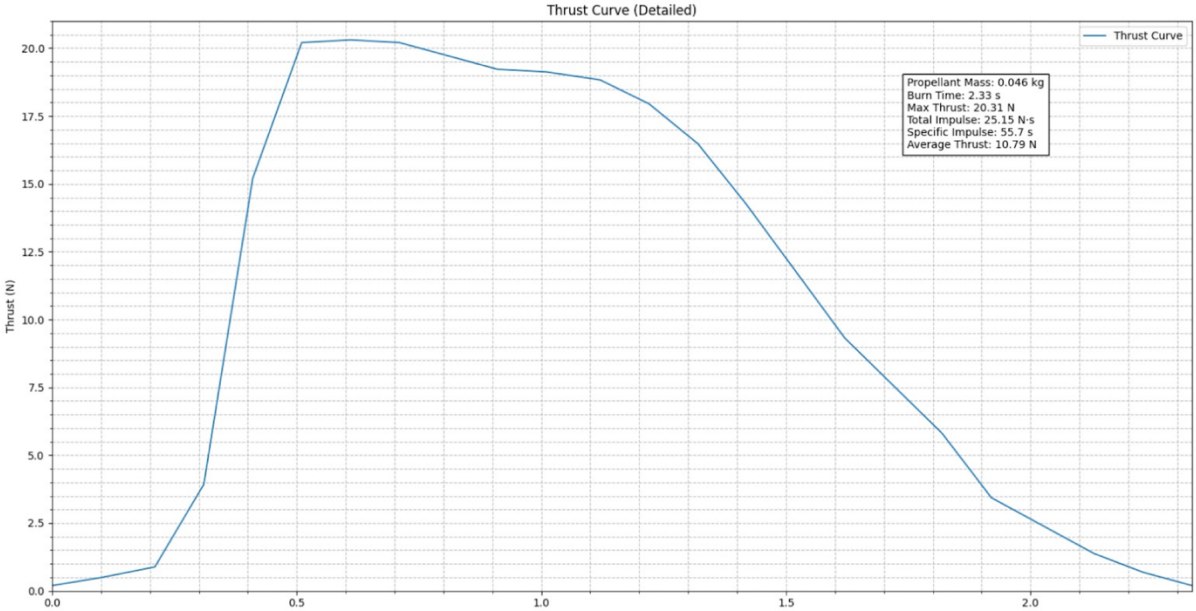
Mass Data

Loaded Mass	0.141 lb	/ 64 g (± 15g)
Propellant Mass	0.101 lb	/ 46 g*
Burnout Mass	0.039 lb	/ 18 g

Performance Data

Burn Time	2.33 sec	
Total Impulse	5.654 lbf.s	/ 25.15 N.s
Specific Impulse	55.7 sec	
Max Thrust	4.566 lbf	/ 20.31 N
Average Thrust	2.426 lbf	/ 10.79 N

(*data provided by manufacturer)



Sincerely,

ABRA Space LTD.
